

# WHITE HOUSE UTILITY DISTRICT FIRE HYDRANT APPLICATION

3303 HWY 31W, P.O. BOX 608, WHITE HOUSE, TN 37188

615-672-4110 PHONE • 615-672-5718 FAX

If you wish to have a new fire hydrant installed, complete and submit this form along with your payment of **\$3,000**. Submission of this form and your payment does not guarantee that a fire hydrant can be installed in the location you request. WHUD must review your application and determine whether or not the minimum state and local fire code requirements can be satisfied prior to approving your request.

Within 10 business days, WHUD's engineering staff will review the request to determine whether or not the proposed fire hydrant can be installed and contact the customer to inform him or her of the results. If WHUD determines the water system can support the installation of the proposed fire hydrant, Tennessee state law stipulates that the Tennessee Department of Environment and Conservation (TDEC) must also approve the location of the proposed fire hydrant. WHUD will submit plans to TDEC on behalf of the applicant in order to obtain State approval. The state approval process will take a minimum of 30 days, and the new fire hydrant installation will commence within 4-6 weeks after WHUD receives written approval from TDEC.

In the event that the requested fire hydrant cannot be supported by the current WHUD distribution system, some planning authorities may allow you to pay fees into an escrow account held by WHUD in order to satisfy county government requirements. If you decide not to install the fire hydrant prior to state approval; WHUD determines it cannot support flow conditions for the hydrant; or you do not choose the escrow option, WHUD will refund your fees.

**\*Required fields**

Applicant Information			
*Contact Name:			
Company Name:			
*Address of Proposed Hydrant:			
Any other descriptive information about where you wish for hydrant to be installed:			
*City:	*State	*Zip	
Date property will be staked with hydrant location flag:	*Daytime Phone:	*Cell Phone:	
Email Address:		Service Order #:	

Hydrant Flow Information
<p>The state of Tennessee requires that all fire hydrants produce a minimum flow of 500 gallons per minute with a minimum residual pressure of 20 psi. Also, water lines must be at least six inches in diameter for fire hydrant connections. WHUD does not require minimum flow rates for fire hydrants to be in excess of the state minimum. Many local planning authorities and/or fire departments require a higher flow rate than the state minimum. You must list below the flow rate in gallons per minute that your local planning authority and/or fire department requires for this fire hydrant installation. If you do not know the required flow rate, you must contact your local planning authority and request that information. WHUD will not contact local planning authorities on your behalf. <u>DO NOT LEAVE BLANK</u>. Your request will not be evaluated without this information.</p>
