Sewer Service Line
Installation & Inspection
Process

January 2018
Connection of building plumbing to main-line stub-outs will require two separate inspections. The first inspection is the **Preliminary** or “open ditch inspection”, and the second is the **Final Inspection**. Both must be accepted as passing by WHUD inspectors before billing can be “transferred” or directed to the homeowner.

The **Preliminary inspection** will include viewing of the entire Sewer Service including the connection to the service stub-out (see section A); also included is the Water Service and its connection to the meter “pigtail” (see section B). The installation must maintain strict adherence to WHUD specifications. Where sewer service is provided within Hendersonville City Limits, Hendersonville Codes must be recognized by requesting an inspection from that department. Contact Steve Yunker at (615)-822-1000.

The **Final Inspection** will include the inspection of the sewer clean-out box (see section C), and the water meter box (see section D).

### A. Gravity Sewer Service Connections-Preliminary Inspection

- Pipe and fitting joints shall be joined with a separate primer and glue or an all-in-one glue and primer product. The primer/glue must be made available upon the inspector’s request.
- At no time shall the gravity main stub-out be altered concerning length or material unless approved by the Inspector prior to installation.
- There shall be no bends added on the main-side of the 6” clean-out.
- All 45 degree bends shall maintain a minimum of 4 feet of linear separation unless otherwise approved by the inspector.
- Cleanout caps shall be solvent weld by threaded with a male operating nut and installed at the time of the Preliminary inspection; it is not required to be glued in place until the Final Inspection.
- At the time of the preliminary inspection all pipe, fittings and connections must be completely visible with gravel bedding in place. At no time shall any length of pipe or fittings be left suspended.
- A smooth elevation transition shall be made by the service line from the point it exits the building to the connection with the sewer stub-out while making use of a minimum number of bends.

### B. Water Service Connections-Preliminary Inspection

- Existing water service stub-outs shall not be altered as to deviate from WHUD specifications; regarding depth of box, material or location.
• The water service connection shall be made outside the meter box by connecting to the provided copper “pig tail”. No connections shall be made inside the meter box.

C. Sewer Clean-out Box Installation-Final Inspection

• The cleanout box shall be installed with the long side of the box perpendicular to the curb.
• The cleanout box shall rest on a minimum of three inches of #67 crushed stone, which must be clearly visible at the time of inspection.
• The box shall be installed level with the finished grade of the yard, with no alterations made to the yard to accommodate the level of the box.
• The cleanout cap assembly shall be glued in place with the threaded plug tightened, and centered within the cleanout box.
• There shall be adequate clearance between the threaded cleanout plug and the bottom of the cleanout box lid to allow complete closure of the lid.

D. Water Meter Box Installation-Final

• The water meter box and lid will be of the part number provided in the standard detail included in this packet.
• The box shall be installed with the long side of the box perpendicular to the curb.
• The box shall rest on a minimum of three inches of #67 crushed stone, which must be clearly visible at the time of inspection.
• The meter, meter setter, and compression adapters on each end of the setter shall be completely visible and centered within the water meter box.
• No dirt or debris shall be present in the box that would hinder the removal of the meter or meter setter.
• The box shall be installed level with the finished grade of the yard, with no alterations made to the yard to accommodate the level of the box.

Inspection process for Grinder Pump Sewer Service Connections

The **Grinder Pump Preliminary Inspection** will consist of an open ditch inspection for all pipe, fittings, 2” check valve box, and grinder tank in place with control panel installed and wired up to the stab disconnect.

*Please refer to the detailed drawing of simplex grinder pump for installation specs.*

The **Grinder Pump Final Inspection** will consist of all grade work complete with seed and straw or sod in place. WHUD will perform a grinder start up and cycle the grinder pump. The customer will be responsible for having the grinder tank full of water so we can perform the start up. **At no time prior to WHUD approving the final inspection should anyone power up the grinder system.**

METER BOX WITH SOLID CAST IRON LID WITH READER LID INSTALLED FLUSH WITH FINISHED GRADE

FINISHED GRADE

18' MINIMUM COVER

SEAMLESS TYPE "K" COPPER TUBING

LINE SETTER TO BE BEDDED WITH A MINIMUM OF THREE INCHES (3") OF 3/4" CRUSHED STONE

TAP MADE AT 10 O' CLOCK OR 2 O' CLOCK WITH DOUBLE STRAP SADDLE

CORP. STOP

NOTES:
1. 3/4" AND 1" METERS FURNISHED BY W.H.U.D.
2. SEE STD-W-03 AND STD-W-04 FOR 3/4" WATER SERVICE ARRANGEMENTS.
3. SEE APPROVED W.H.U.D. MATERIAL LIST.
HDPE METER BOX AND HDPE COVER WITH CAST IRON READER DOOR AND AMERICAN OPENING INSTALLED FLUSH WITH FINISHED GRADE

FINISHED GRADE

18" MINIMUM COVER

REHAU MUNICIPEX PEXA WITH 14 GAUGE TRACER WIRE TAPED TO SERVICE TO METER BOX

WATER MAIN

DIRECT TAP MADE AT 9 O'CLOCK OR 3 O'CLOCK

LINE SETTER TO BE BEDDED WITH A MINIMUM OF THREE INCHES (3") OF 3/4" CRUSHED STONE

LINE SETTER W/ FEMALE ENDS, BALL INLET VALVE, SINGLE ANGLE OUTLET CHECK VALVE, DUAL PURPOSE OUTLET WITH MALE ADAPTOR X COMPRESSION FITTING. SETTER NUTS AND OPENINGS SHALL BE COVERED WITH DUCT TAPE.

NOTES:
1. 3/4" AND 1" METERS FURNISHED BY W.H.U.D.
2. SEE STD-W-03 AND STD-W-04 FOR 3/4" WATER SERVICE ARRANGEMENTS.
3. SEE APPROVED W.H.U.D. MATERIAL LIST.
NOTES:

SIMPLEX GRINDER TAP
(SHORT TAP)

NOTES:
1. SANITARY SEWER FORCE MAIN TAPS SHALL MAINTAIN A MINIMUM HORIZONTAL SEPARATION OF 4'.
2. CONTRACTOR TO PROVIDE AND INSTALL TRACER WIRE AND DETECTION TAPE ON ALL SANITARY SEWER FORCE MAIN.
3. SEWER SERVICE MARKER TO BE 2" Ø STEEL PIPE (SCH 40), PAINTED FLUORESCENT GREEN, AND EXTENDED A MINIMUM OF 4' ABOVE FINISHED GRADE.
4. SEE APPROVED W.H.U.D. MATERIALS LIST.
N.T.S.
NOTES:
1. VERIFY MOTOR AMPERAGE AND ALL NAMEPLATE REQUIREMENTS PRIOR TO INSTALLATION.
2. ALL CONNECTIONS SHALL BE IN ACCORDANCE WITH LOCAL CODES AND NEC
3. MOUNT ALL ELECTRICAL EQUIPMENT A MINIMUM OF 48" ABOVE GRADE AND MAXIMUM OF 60" ABOVE GRADE.
4. SEE W.H.U.D. APPROVED MATERIALS LIST.
NOTES:
1. THE SEPTIC TANK SHOWN IS TO BE A STANDARD 1000 GALLON SEPTIC TANK AND MUST BE INSPECTED BY AN AUTHORIZED AGENT OF THE WHITE HOUSE UTILITY DISTRICT. ALL PIPE PENETRATIONS SHALL BE THROUGH A RESILIENT BOOT. ALL CONCRETE AND RISER JOINTS SHALL BE SEALED WITH BITUMASTIC MATERIAL. THIS WILL REQUIRE A 24 HR LEAK DOWN TEST.
2. SEE APPROVED W.H.U.D. MATERIALS LIST.
MAINTAINED BY THE CUSTOMER TO THIS POINT

MAINTAINED BY WHITE HOUSE UTILITY DISTRICT FROM THIS POINT TO SEWER MAIN

5' MIN. SEPARATION

3/4" CRUSHED STONE OR APPROVED EQUAL

NOTES:
I. SEE APPROVED W.H.U.D. MATERIALS LIST.
A. MINIMUM 6", BUT NOT LESS THAN PIPE DIAMETER.
B. INLET PIPE INVERT TO BE 2 1/2" ABOVE LIQUID SURFACE.
C. INLET PIPE TO TERMINATE 2/3 DEPTH OF WATER LEVEL.
D. 90 DEGREE SWEEP, MINIMUM SIZE - 6" PVC PIPE.
E. 12" FROM FLOOR TO END OF OUTLET PIPE.
F. OUTLET PIPE NO SMALLER THAN INLET PIPE, MINIMUM - 4".
G. MINIMUM DEPTH OF LIQUID CAPACITY - 42".
H. MAXIMUM DISTANCE FROM CEILING - 6".

NOTES:
1. MINIMUM TOP THICKNESS - 6" (INCHES)
2. MINIMUM TOP THICKNESS IN PAVED AREAS - 8" (INCHES)
3. MINIMUM GREASE INTERCEPTOR CAPACITY - 1500 GALLONS
4. WHEN A LARGER CAPACITY GREASE INTERCEPTOR IS REQUIRED, SHOW 1500 GALLON TANKS CONNECTED IN SERIES.
5. CONCRETE GRATE AND STEPS. (MAXIMUM OF 2)
6. ADJUSTMENTS GREATER THAN ONE (1) FOOT REQUIRE FOUR (4) FOOT DIAMETER MANHOLE RISERS.
7. JBS 1155 OR APPROVED EQUAL TRAFFIC MANHOLE FRAME AND COVER WITH CRETTEX INFLOW DISH.
8. SEE APPROVED W.H.U.D. MATERIALS LIST.
