

Developer's Packet

Water and Sewer Construction

We at White House Utility District understand the importance of helping you to meet your project deadlines. This developer's packet has been created to help streamline the review, construction, and approval of your development within the White House Utility District service area. This packet contains an outline that will help you to understand the development process, step by step. In addition to the outline, specific letters and forms that you will be required to use throughout the process have been enclosed. These are shown in the order that they are to be submitted. If, throughout the process, you have any questions, please feel free to call.

Table of Contents:	Pg.
Process for Water and Sewer Utility Plan Approval and Construction	2
Availability of Service Request	8

Pat Harrell	District Engineer	615-672-9527	pharrell@whud.org

Process for Water & Sewer Utility Plan Approval and Construction

1. The developer must notify White House Utility District of his/her plans to develop within its service area by completing the [“Availability of Service Request”](#) and attaching a check made payable to White House Utility District for \$50.
2. Based on the information supplied on the Availability of Service Request, WHUD will study the existing infrastructure and determine its ability to serve the proposed development. Depending on the complexity of the request, a response will be sent in writing within 25 business days following receipt by WHUD. Please keep this in mind when trying to ensure that you meet your own project timelines.
3. Digital files (PDF & DWG) of water plans need to be submitted to the White House Utility District (WHUD). Additional information about the design requirements can be found in the Engineer’s packet at <https://www.whud.org/pdfs/developer/Engineer%20Packet.pdf>. As the developer, you will benefit from becoming familiar with all of the information contained within the Engineer’s Packet. The items that should accompany your plans are:
 - a. The [“Development Information Form”](#), completely filled out.
 - b. A check made payable to White House Utility District for \$1,000 to pay for the Plan Review Fee for each utility. (\$2,000 total for Water & Sewer Plans)

The plans and the documents above will need to be emailed to, whudengineering@whud.org .

4. Once all of the items listed above have been received by WHUD, an initial review of the plans will be conducted, and your engineer will be notified within 21 business days if plan corrections are needed.
5. WHUD will forward a Development Agreement to the developer that outlines the developer’s obligations as well as our own. Approved plans will not be released until this agreement is executed.
6. The engineer should make corrections to the plans and send revised digital files back to WHUD. Within 21 business days of receipt, WHUD will review the revised plans and notify the engineer of approval if all corrections have been made.
7. If WHUD issues more corrections needed after three reviews, the developer will be notified of deficiencies in the plans and informed that an additional nonrefundable fee of \$1,000 will be required before WHUD will continue the review process. The fee will cover three additional plan reviews. Each plan review will be completed within 21 business days of receipt.
8. Once plans have been reviewed and approved, WHUD will request the engineer to submit a minimum of ten sets of plans with all final corrections made for WHUD to stamp “Approved for Construction” along with the final digital files.***Reminder - The approved plans will not be released to the engineer or the developer until the digital file has been received by WHUD and the Development Agreement is fully executed.**
9. After WHUD has approved construction plans and notified the developer via email, the developer or engineer will need to pick up the plans from WHUD. If the plans require approval by the Tennessee Department of Environment and Conservation,

our engineering department will advise you or your engineer of this. WHUD is not responsible for fees associated with TDEC's review.

10. After State approval, if needed, one set of plans is kept by the State of Tennessee, four sets of plans are to be sent to WHUD by the developer, and the remaining sets are for the developer's use. Remember, the contractor will be required to keep State approved plans on the job site at all times. The developer also needs to provide a copy of the state approval letter to WHUD prior to a pre-construction meeting.
11. The developer will need to provide to WHUD any other applicable permits required to complete installation as well as submit the form entitled "[Recognition of WHUD Specifications \(Developer\)](#)". Specification information can be found toward the bottom of the following Web page: <https://www.whud.org/developers>.
12. The developer will need to contact WHUD in writing using the letter entitled "[Request for Contractor Approval](#)" along with the form entitled "[Contractor Information Form](#)". As stated on the form, a copy of the license and proof of insurance must accompany these upon submission to WHUD. If any subcontractors are to be used, the same information must be provided for each.
13. WHUD will approve or disapprove the contractor in writing within ten business days. If the contractor is not approved, the developer must resubmit for contractor approval until a satisfactory contractor is chosen.
14. The contractor will work with their materials supplier to send to WHUD via email a package of material submittals containing all pertinent manufacturing and installation data as well as the form entitled "[Recognition of WHUD Specifications \(Contractor\)](#)". Specification information can be found toward the bottom of the following Web page: <https://www.whud.org/developers>. The material submittals shall be in .pdf format and emailed to Shannon Murphy at whudengineering@whud.org for review by the WHUD inspector assigned to the project.
15. WHUD will review the materials and contact the supplier with any deficiencies within five business days of receipt. If revisions are needed, WHUD allows five business days to review each submission of materials. When materials are complete and approved, WHUD will stamp and email an approved set to the contractor, supplier, and developer for their use. For more information about materials, visit our Web site under the Specifications heading at: <https://www.whud.org/developers>.
16. Before the pre-construction meeting, the developer will submit a bond or letter of credit in a form acceptable to WHUD in the amount stated within the development agreement. This bond or letter of credit will be held by WHUD until all construction is complete and officially accepted by WHUD. At the time of acceptance, the developer may request a reduction of the bond or letter of credit amount by 90%, with WHUD holding 10% during the one-year warranty period that the developer provides to WHUD. IF the developer is not platting the development, then they may opt to submit a bond or Letter of Credit at the time of acceptance in the amount of 10% of the estimated costs of the project to be held for the one-year warranty period.
17. Before the pre-construction meeting, the developer shall have a check made payable to White House Utility District for [Capacity fees](#). Inspection and Administrative fees for commercial developments and offsite utilities, if applicable, will be calculated on an individual basis and the amount will be clearly communicated to the developer in the Development Agreement.

18. WHUD will work with the developer to schedule a pre-construction meeting. During the pre-construction meeting WHUD specifications, WHUD policies, and start of construction will be discussed. The developer, contractor, contractor's foreman, and engineer must attend the pre-construction meeting.
19. When materials arrive on-site, the contractor will contact the WHUD inspector to conduct an inspection of the approved materials.
20. Before water construction may begin, the developer will need to submit the letter entitled "[Certification of Water/Sewer Utilities at Subgrade](#)" to certify that he/she has witnessed that subgrade has been achieved within the area of the project.

After Sewer Construction is complete:

21. The developer's contractor will coordinate with WHUD inspectors to begin the 60-day waiting period required for potential settlement of new gravity sewer mains and manholes.
22. The 60-day settlement period is not required prior to testing sewer force main installations. After the completion of force main installations are confirmed by a WHUD inspector, the contractor will subject the main(s) to a preliminary pressure test. If the preliminary test passes, the contractor will coordinate with a WHUD inspector to schedule the official pressure test witnessed by the inspector.
23. Sixty days must elapse before WHUD will allow final testing, cleaning and televising of the gravity sewer mains and manholes, or coating inspections. (The interior coating required on all sewer manholes and wet wells may be applied during this 60-day settlement period.) NOTE: The coating system may be applied as early as during the 60-day settlement period or as late as after the cleaning and televising process.
24. At the end of the 60-day gravity sewer settlement period, the contractor will conduct a preliminary vacuum test of all sewer mains and manholes as well as a mandrel test of all gravity mains. If the preliminary tests pass, the contractor will coordinate with a WHUD inspector to schedule the official testing witnessed by the inspector. Sewer force mains may be tested prior to the 60-day settlement period as long as all construction of the force main is otherwise complete and WHUD has notified the developer that such testing can take place.
25. Cleaning and televising of the sewer mains can take place only after all installation is complete per WHUD specifications, including successful testing of gravity mains and manholes. The developer will have been previously notified during the pre-construction meeting of approved contractors capable of performing this type of work. The developer is responsible for the costs associated with this and all other required testing. NOTE: Cleaning and televising may be completed with or without the coating system in place.

Although no letter will be submitted to WHUD requesting permission to clean and televise the sewer mains, a representative for the developer must first contact a WHUD inspector to obtain permission to proceed and then work with a WHUD inspector to have them present during the cleaning and televising process, giving a minimum of five business days notice for scheduling purposes.

The developer shall provide WHUD with two digital copies of all reports, two hard copies of all reports, and two copies of the video footage associated with the inspection of new sewer mains. WHUD will review the sewer video inspections within ten business days of receipt.

26. WHUD will notify the contractor of whether or not the sewer video inspection report has been approved and provide a punch list if the report is disapproved.
27. After the sewer video inspection footage is reviewed and accepted or after all sewer video punch list items are complete, the contractor may request that WHUD inspect the coating system for the entire phase. All chimney seals and water tight inserts must be in place per WHUD specifications, and a general inspection will be made of manhole casting grade, service markers, and the overall state of the installation to ensure no damage has taken place.
28. Once utilities have been installed, the developer will submit the form entitled, ["Submittal of Sewer Utility Construction Cost"](#) to WHUD detailing the cost of the project. For public sewer mains, the following is an example:

Feet of Pipe	Gravity/Force Main	Diameter of Pipe	Pipe Material	\$ Amount
500	Gravity	6"	SDR 26 PVC	\$120,000
700	Gravity	6"	DIP	\$150,000
100	Force Main	4"	Class 50 DIP	\$2,000
200	Force Main	8"	C900 PVC	\$5,000
Total Cost for Sewer Construction				\$320,000

The cost should be broken down by sewer main type (gravity or force main), diameter, and pipe material. Cost should include labor, pipe, fittings, manholes, tie-ins, etc. Pump Stations, if any, should be listed as separate line items providing one lump sum for labor and materials. SCADA costs do not need to be included.

29. The developer will be notified in writing confirming whether or not the cost breakdown is acceptable.
30. The developer will have his/her engineer produce As-built drawings to be submitted to WHUD for approval. As-built requirements can be found within the WHUD Engineer Packet on the District's Web site at <https://www.whud.org/pdfs/developer/Engineer%20Packet.pdf>. WHUD will review As-built drawings within five business days of receipt.
31. WHUD will notify the engineer in writing of whether or not the As-built drawings have been approved. If revisions are needed, WHUD allows five business days to review each submission of As-built drawings. Once approved, the developer and engineer will be notified in writing.
32. Once a final walk-through inspection has been completed, WHUD will notify the developer in writing that all work in the development has been completed successfully. This letter will notify the developer that sewer taps are now available for sale through our customer service department and will list the one-year infrastructure warranty start date. Please note that the billing account will not be transferred to the homeowner until the service line has passed both a preliminary and final inspection by WHUD personnel. More information about this process can be found on our Website at <https://www.whud.org/pdfs/specifications/Service%20Line%20Installation%20and%20Inspection%20Process.pdf>.

After Water Construction is complete:

1. The contractor will conduct a preliminary pressure test of the water lines, and if they pass, the contractor will coordinate with a WHUD inspector to schedule the official pressure test witnessed by the inspector.
2. After the pressure test has passed, the contractor will send in the form letter entitled "[Contractor Certification of Disinfection Quantity](#)" to WHUD ensuring that disinfection levels meet the state requirement of 50 ppm throughout the distribution system.
3. After WHUD approves the Contractor Certification of Disinfection Quantity letter, WHUD will coordinate with the contractor to begin the flushing and sampling process. **Depending on conditions of the water line, workmanship, and available chorine residual this process may or may not be successful on the initial attempt.** Special attention should be given during construction to keep the inside of the water line as free from debris as possible. Foreign matter inside the pipe is difficult to remove and can contribute to a positive bacteria sample. If needed, the contractor will be required to re-disinfect any main that fails a bacteria test or exhibits what WHUD determines to be a high chlorine demand. This process will continue until two negative bacteria tests are obtained and/or significant chlorine demands are eliminated from the new water main(s).
4. If the tests are negative, you will be notified that water service is available for fire protection only. **Domestic water services will not be available until the sewer system has been approved by WHUD if on WHUD sewer.**
5. Once utilities have been installed, the developer will submit the form entitled, "Submittal of Water Utility Construction Cost" to WHUD detailing the cost of the project. For public water mains, break down the cost for each size of pipe by pipe material.

The following is an example:

Feet of Pipe	Diameter of Pipe	Pipe Material	\$ Amount
1,000	6"	DIP	\$100,000
700	8"	DIP	\$91,000
Total Cost for Water Construction			\$191,000

The cost should include labor, pipe, fire hydrants, fittings, tie-ins, etc. installed along each section of specific water main diameter/material. Pump Stations, if any, should be listed as separate line items. If your project involves a large meter installation, the line item on the cost documentation should include the meter, vault, bypass, associated pipe work, and labor. Costs to install backflow prevention assemblies/enclosures should not be included.

6. The developer will be notified in writing confirming whether or not the cost breakdown is acceptable.
7. The developer will have his/her engineer produce As-built drawings to be submitted to WHUD for approval. As-built requirements can be found within the WHUD Engineer Packet on the District's Web site at <https://www.whud.org/pdfs/developer/Engineer%20Packet.pdf>. WHUD will review As-built drawings within five business days of receipt.
8. WHUD will notify the engineer in writing of whether or not the As-built drawings have been approved. If revisions are needed, WHUD allows five business days to review

each submission of As-built drawings. Once approved, the developer and engineer will be notified in writing.

9. Once the water and sewer systems have been approved by WHUD, we will notify the developer in writing that all work in the development has been completed successfully. This letter will also state that water and sewer taps are now available for sale through our customer service department and will list the one-year infrastructure warranty start date.
10. Prior to the expiration of the one-year warranty period, WHUD will perform a final inspection of the water and sewer facilities that were installed by the developer. Any items found to be deficient will be noted and notification will be sent to the developer in writing. All deficiencies noted shall be repaired in accordance with the Development Agreement and WHUD specifications and will be done at the developer's sole expense.

Should the developer fail to make the necessary warranty repairs within the specified time frame, WHUD will arrange for a contractor to complete the punch-list items and will bill the developer for an amount that will include the actual repair costs and an additional administration processing surcharge of 100% of the repair costs. If payment is not made in a timely manner, WHUD may choose to enforce any or all of the following:

- a. Cease the sell of taps within the development
 - b. Issue a stop work order for other projects currently under construction by the developer
 - c. Bar the developer from future water and sewer projects within the White House Utility District boundaries
 - d. Pursue legal action against the developer
11. After the water and sewer construction has passed the one-year inspection, the warranty period for which the developer is responsible shall expire. WHUD will here forth assume responsibility of the water and sewer mains constructed as a result of your development.

AVAILABILITY OF SERVICE REQUEST

A \$50 check made payable to White House Utility District must accompany this request. Depending on the complexity of the request, a response will be sent between 5-25 business days following receipt by WHUD. Please keep this in mind when trying to ensure that you meet your own project timelines. The response will include a determination of the adequacy of the existing facilities to serve the proposed development based upon the information supplied above. Should adequate facilities not exist, you may additionally request an FID (Facilities Improvement Determination) Study be conducted by our District Engineer that will determine the required upgrades you would be responsible for installing in order to support your development. If you wish to have this study conducted, you may submit a request in writing along with a \$1,000 check made payable to White House Utility District. FID Study documents will be sent within two calendar months following the receipt of the request.

SUBMITTAL OF SEWER UTILITY CONSTRUCTION COST

(Date)

White House Utility District
Attn: Engineering
P.O. Box 608
White House, TN 37188
whudengineering@whud.org

The public sewer main construction cost for _____
(Development, Phase, Section)
has been completed. The construction cost is outlined in the below chart.

Diameter of Gravity Main	Diameter of Force Main	Pipe Material	Linear Footage of Sewer Main	Construction Cost of Sewer Main

The construction cost for each individually sized sewer main includes all costs associated with the said sewer main's appurtenances (labor, service lines, valves, manhole structures, etc.).

Project Pump Station Name	Construction Cost of Pump Station

The construction cost for each individual pump station includes all costs associated with the said pump station's appurtenances (labor, piping, valves, pumps, pump house, etc.).

Total Cost Paid for Engineering Services	
---	--

Taking into account all of the above information, the total construction cost for all public sewer mains, pump station(s), and engineering services associated with this project is _____.

If you have any questions concerning the supplied information, I can be reached at

(Phone Number) OR _____
(Email Address)

WHUD TAP FEES

5/8 x 3/4" Water.....	\$2,000 + \$50 New Account Setup Fee (WHUD provides meter & all materials, installs meter, and makes the tap.)
5/8 x 3/4" Irrigation.....	\$1200 + \$50 New Account Setup Fee (WHUD provides meter & all materials for making the tap, installs meter, and makes the tap. For residential irrigation use only. Available only in addition to the purchase of the domestic water meter listed above. Additional costs to the homeowner will include a backflow prevention device and contracting with a plumber for its installation.)
1" Water.....	\$2,800 + \$50 New Account Setup Fee (WHUD provides meter & all materials, installs meter, and makes the tap.)
2" Water	\$4,000 + \$50 New Account Setup Fee (WHUD provides meter-Contractor must provide labor & all other materials and is responsible for making the tap)
4" Water.....	\$7,000 Capacity Fee Only + \$50 Account Setup Fee (Contractor must provide all labor, materials, and meter per WHUD specs.)
6" Water.....	\$10,200 Capacity Fee Only + \$50 Account Setup Fee (Contractor must provide all labor, materials, and meter per WHUD specs.)
8" Water.....	\$13,600 Capacity Fee Only + \$50 Account Setup Fee (Contractor must provide all labor, materials, and meter per WHUD specs.)
Sewer Capacity Fee.....	\$2,700 (For each equivalent residential connection. Retail, commercial, and Multifamily fees will be calculated on a case by case basis.)

All fees listed are for the tap only when connecting to existing WHUD mains and do not apply to subdivision main extensions. The customer is responsible for the connection from the tap to the home or business.

RECAP OF DEVELOPMENT FEES

Availability Letters for Water and/or Sewer	\$50 per letter
Facilities Improvement Determination Study.....	\$1,000 per development
Construction Plan Review.....	\$1,000 per phase
Water Construction Administration & Inspection Fee.....	\$500 per lot
Sewer Construction Administration & Inspection Fee	\$500 per lot
